Materialize, Bootstrap

Agile and Scrum

Skills

Fast Learner
Analytical Thinking
Work Under Pressure
Ability to Work in a Team
Creative Problem Solving

Education

Computer Network Technician, CET 1 - IPN
August 2014 — July 2017

Computer Systems Engineer, ESCOM - IPN
August 2017 — 2022

Employment History

Full Stack Web Developer Jr, Meengo
January 2021 — Present

As part of a team, I work with React on the Front-end and with Laravel on the Back-end. I've implemented authentication services with Google and Facebook, in addition to using different APIs for tasks such as sending text messages, emails, show maps, etc. Currently I continue adding more functionalities and working on improving the design and performance of the Web application.

Projects

Mobile App, C1-Habits

As a freelancer, I developed a React Native application that uses Firebase services to store the information that users create and share. I made use of some packages to add functionalities such as the visualization of user activity statistics.

Web Page, Guerra de Robots

As a team with a co-worker from school, we created a tournament registration page for the IPN that works with JavaScript on the client as well as the server side. I configured different services such as Heroku to host the page, MongoDB Atlas for the database and some packages such as Passport for user authentication.

Courses

Master en PHP, SQL, POO, MVC, Laravel, Symfony, WordPress (Udemy)

Master en JavaScript: Aprender JS, jQuery, Angular, NodeJS (Udemy)

Master en webs Full Stack: Angular, Node, Laravel (Udemy)
